The double integral

$$E(a, b) = \int_0^\pi dx \int_0^\pi dy \sqrt{1 + a \cos x + b \cos y} \quad (1)$$

is evaluated in terms of complete elliptic integrals.

Keywords: Double elliptic integral, hypergeometric function

V. Bârsan[1] has recently investigated a double integral equivalent to

$$E(a, b) = \int_0^\pi dx \int_0^\pi dy \sqrt{1 + a \cos x + b \cos y} \quad (1)$$

which, by means of an ingenious procedure, he expressed as a derivative of a hypergeometric function of two variables. In this note we show that (1) can be reduced in a relatively direct manner to a simple combination of complete elliptic integrals. let us assume that  $0 \leq a + b \leq 1$  and initially that  $\operatorname{Re} s > 0$ . Then, in the usual way one has

$$\begin{aligned} I &= \int_0^\pi dx \int_0^\pi dy (1 + a \cos x + b \cos y)^{-s} = \\ &= \frac{1}{\Gamma(s)} \int_0^\infty dst^{s-1} e^{-t} \int_0^\pi dx \int_0^\pi dy e^{-at \cos x - bt \cos y} = \\ &= \frac{\pi^2}{\Gamma(s)} \int_0^\infty t^{s-1} e^{-t} I_0(at) I_0(bt) dt. \end{aligned} \quad (2)$$

The latter is a tabulated Laplace transform[2] yielding

$$I = \pi^2 F_4(s/2, (s+1)/2; 1, 1; u(1-v), v(1-u)) \quad (3)$$

with

$$\begin{aligned} u &= \frac{1}{2}[1 + a^2 - b^2 - \sqrt{(1 + a^2 - b^2)^2 - 4a^2}] \\ v &= \frac{1}{2}[1 - a^2 + b^2 - \sqrt{(1 - a^2 + b^2)^2 - 4b^2}]. \end{aligned} \quad (4)$$

(Note that  $u(1-v) = a^2$ ,  $v(1-u) = b^2$ ). Now, by analytic continuation we can take  $s = -1/2$ . Next, by L. Slater's reduction formula[3], one has

$$\begin{aligned} E(a, b) &= \pi^2 [ {}_2F_1(-1/4, 1/4; 1; u) {}_2F_1(-1/4, 1/4; 1; v) + \\ &\quad \frac{1}{16} uv {}_2F_1(3/4, 5/4; 2; u) {}_2F_1(3/4, 5/4; 2; v)]. \end{aligned} \quad (5)$$

Finally, since[4]

$$\begin{aligned} {}_2F_1(-1/4, 1/4; 1; z^2) &= \frac{2}{\pi} \sqrt{1+z} \mathbf{E}(k) \\ {}_2F_1(3/4, 5/4; 2; z^2) &= \frac{8}{\pi z^2 \sqrt{1+z}} [\mathbf{K}(k) - (1+z)\mathbf{E}(k)] \\ k &= \sqrt{\frac{2z}{1+z}} \end{aligned} \quad (6)$$

we have the desired expression

$$\begin{aligned} \frac{1}{4}E(a, b) = & 2\sqrt{(1+\sqrt{u})(1+\sqrt{v})}\mathbf{E}[k(\sqrt{u})]\mathbf{E}[k(\sqrt{v})] + \\ & \frac{\mathbf{K}[k(\sqrt{u})]\mathbf{K}[k(\sqrt{v})]}{\sqrt{(1+\sqrt{u})(1+\sqrt{v})}} - \sqrt{\frac{1+\sqrt{u}}{1+\sqrt{v}}}\mathbf{E}[k(\sqrt{u})]\mathbf{K}[k(\sqrt{v})] - \\ & \sqrt{\frac{1+\sqrt{v}}{1+\sqrt{u}}}\mathbf{E}[k(\sqrt{v})]\mathbf{K}[k(\sqrt{u})] \end{aligned} \quad (7)$$

For the case  $a = b$  (3) and (7) simplify to

$$\begin{aligned} \frac{1}{4} \int_0^\pi \int_0^\pi \sqrt{1+a(\cos x + \cos y)} dx dy = & \frac{\pi^2}{4} {}_3F_2(-1/4, 1/4, 1/2; 1, 1; 4a^2) = \\ & 2(1+\sqrt{u})\mathbf{E}^2(k) + (1+\sqrt{u})^{-1}\mathbf{K}^2(k) - 2\mathbf{E}(k)\mathbf{K}(k), \end{aligned} \quad (8)$$

where  $u = (1 - \sqrt{1 - 4a^2})/2$ ,  $k = \sqrt{2\sqrt{u}/(1 + \sqrt{u})}$ .
